

The Principle of “‘Eventivity’” ‘Intra-Duality’ leading to [Onto-]«Autokinesis» and to ‘Meta-Genealogy’.

The principal “‘eventities’” of the net-*expanding cosmological ontology* evince a *principle* of ineluctable ‘*intra-duality*’, or even of ‘*intra-multiality*’, as their “*energizing principle*” [cf. **Marx**], the “*energizing principle*” of ‘*cosmo-onto-dynamasis*’.

For example, the *cosmos* as a *whole* has recently been *discovered* to *develop* in and through the throes of an *internal, immanent, inescapable duality* between the *cosmos-expansive*, “‘anti-gravitic’” “‘force’” of “*Dark Energy*”, & the *cosmos-contractive* “‘gravitic’” *force* of “*Dark Matter*”.

Together, “*Dark Energy*”, &/versus “*Dark Matter*” constitute the vast preponderance of known *cosmological* “mass-energy”, dwarfing the contribution of ordinary, “‘*Bright Matter*’”.

Another key example is the gravitational self-*implosive* versus the thermo-nuclear self-*explosive* ‘*intra-duality*’ of stars -- of those existences by which planetary biospheres, and planetary humanities, sustain life.

These two forces “‘vectorially’” oppose one another inside every “volume-element” of the body of a star.

It is their opposition that enables stellar ‘durativity’, the long lives of stars. Those lives last, typically, for billions of years. Duration-of-existence, for a star, as such, as a star, depends, especially, upon its initial mass.

That is, without both, without their mutual opposition -- with either force *alone* -- stars would *implode*, &/or *explode*, *out* of existence, within a fraction of a moment of their coming *into* existence.

This *explosion-versus-implosion self-opposition* drives “stellar evolution”, &, ultimately, it also drives stellar ‘self-transition’ -- the “deaths” of stars, when the “fuel” of ‘thermo-nuclearly fusible’ stellar-core higher atomic species is used up.

Stars then destroy themselves, because their internal self-explosive force dies.

Depending especially upon their initial mass, stars then self-destruct, either in catastrophic self-collapse -- e.g., to white dwarf “degenerate” matter, to neutron star “‘neutronium’”, to “black hole” ‘holonium’, etc. -- or, more commonly, in a combination, a “‘complex unity’”, of sub-nova, nova, super-nova, or hyper-nova self-demise: either “mass ejection”, or more-catastrophic ‘self-*explosion*’, coupled with either ‘self-contraction’, or more-catastrophic ‘self-*implosion*’.

A more immediate, more local, more contemporary example of this *principle* is that of the ‘*intra-duality*’ of *modern, capital-centered society*.

This *human-social* ‘*intra-duality*’ is that between *capital* as “*self-expanding value*” [Marx] & *capital* as ‘*self-contracting value*’.

The ‘*self-contracting value*’ side of this ‘*intra-duality*’ arises via the *fixed capital obsolescence-depreciation effect of the growth of the social forces of production* -- of machinery-facilitated productivity -- *accelerating within an industrial capitalist system*.

This is the core ‘*intra-duality*’ which drives the evolution, &, ‘predictedly’, the ultimate ‘self-transition’, of *modern society*.

Choosing the “‘*eu-catastrophic*’” [cf. **Tolkein**] side, as opposed to the “‘*dis-catastrophic*’” [cf. **Tolkein**] side, of this, *our present* crossroads, *we can achieve, we forecast*, the more advanced form of *human society* named “‘*equitism*’”, or ‘*political-ECONOMIC democracy*’ [http://equitism.org/Equitism/Equitism-entry.htm].
